Glossary

| Term | Definition |
|---------------------------------------|--|
| Design | All of the decisions that shape a development throughout its design and pre-construction, construction / commissioning, operation and, where relevant, decommissioning phases. |
| Development Consent Order (DCO) | A consent required under Section 37 of the Planning Act 2008 to authorise the development of a Nationally Significant Infrastructure Project, which is granted by the relevant Secretary of State following an application to the Planning Inspectorate. |
| Effect | An effect is the consequence of an impact when considered in combination with the receptor's sensitivity / value / importance, defined in terms of significance. |
| Environmental Impact Assessment (EIA) | A process by which certain planned projects must be assessed before a formal decision to proceed can be made. It involves the collection and consideration of environmental information and includes the publication of an Environmental Statement. |
| Environmental Statement (ES) | A document reporting the findings of the EIA which describes the measures proposed to mitigate any likely significant effects. |
| Evidence Plan Process (EPP) | A voluntary consultation process with technical stakeholders via Expert Topic Group (ETG) meetings to encourage upfront agreement on the nature, volume and range of supporting evidence required to inform the EIA and HRA process. |
| Expert Topic Group (ETG) | A forum for targeted technical engagement with relevant stakeholders through the EPP. |
| Impact | A change resulting from an activity associated with the Project, defined in terms of magnitude. |
| Onshore Converter Station (OCS) Zone | The area within which the Onshore Converter Station and Energy Storage and Balancing Infrastructure will be located in vicinity of Birkhill Wood Substation. |
| Onshore Development Area | The area in which all onshore infrastructure associated with the Project will be located, including any temporary works area required during construction and permanent land required for mitigation and enhancement areas, which extends landward of Mean Low Water Springs. There is an overlap with the Offshore Development Area in the intertidal zone. |
| Project Design Envelope | <p>A range of design parameters defined where appropriate to enable the identification and assessment of likely significant effects arising from a project's worst-case scenario.</p> <p>The Project Design Envelope incorporates flexibility and addresses uncertainty in the DCO application and will be further refined during the EIA process.</p> |

| Term | Definition |
|----------------------------------|---|
| Temporary Construction Compounds | Areas set aside to facilitate the construction works for the onshore infrastructure, which include the landfall construction compound, main and intermediate construction compounds for onshore export cable works and OCS and ESBI construction compounds. |
| The Applicant | SSE Renewables and Equinor acting through 'Doggerbank Offshore Wind Farm Project 4 Projco Limited'. |
| The Project | Dogger Bank D (DBD) Offshore Wind Farm Project, also referred to as DBD in this PEIR. |

24.5 Onshore Heritage Setting Assessment

24.5.1 Introduction

1. This appendix to the Dogger Bank D Offshore Wind Farm Project (hereafter ‘the Project’ or ‘DBD’) Preliminary Environmental Information Report (PEIR) supports **Volume 1, Chapter 24 Onshore Archaeology and Cultural Heritage**. This appendix forms part of the PEIR for the onshore elements of the Project.
2. The onshore elements of the Project forming the Onshore Development Area will include landfall, onshore export cables within the onshore export cable corridor (ECC) and the Onshore Converter Station (OCS) and Energy Storage and Balancing Infrastructure (ESBI). A full description of the Project is provided in **Volume 1, Chapter 4 Project Description**.
3. The purpose of this appendix is to present the results of a high-level assessment of the predicted impacts from the OCS Zones 4 and 8 (i.e. in which the OCS and ESBI will be co-located) on the significance of onshore heritage assets resulting from changes in their setting as part of the onshore development of the Project during the operation and maintenance phase.
4. To date, 18 designated heritage assets have been identified where a change in setting could lead to a degree of harm to their heritage significance. This report provides an initial high-level assessment of the predicted impact from the Project on these 18 identified designated heritage assets (see **Section 24.5.6**).
5. **Annex 24.5.1** includes supporting plates which are images taken during the site visit (described in **Section 24.5.5**) and **Annex 24.5.2** includes supporting figures.

24.5.2 Consultation

6. A Zone of Theoretical Visibility (ZTV) generated for the Landscape and Visual Impact Assessment (LVIA) for OCS Zones 4 and 8 and proposed cultural heritage specific viewpoints were presented and discussed at the Landscape and Visual Impact Assessment Expert Topic Group (ETG9) meeting on 10 September 2024. The cultural heritage viewpoints proposed for PEIR were:
 - CH1 Heavy Anti-aircraft gunsite, 350m west of Butt Farm (NHLE 1019186 – Scheduled Monument). See **Figure 27-15a** to **Figure 27-15d** (**Volume 1, Chapter 27 Landscape and Visual Assessment**); and
 - CH2 Beverley Minster (NHLE 1084028). This viewpoint has not been progressed for PEIR and will be reconsidered through further consultation prior to ES.

7. A third viewpoint was suggested by the ETG relating to potential views from Westwood Pasture, including the Grade II Listed Black Mill (assessed in **Section 24.5.6.13**) and wider reaching views towards both OCS zones and the Grade I Listed Beverley Minster (assessed in **Section 24.5.6.10**). As the ZTV shows limited visibility from OCS Zone 4 (**Annex 24.5.2, Figure 24.5-2**) and almost none from OCS Zone 8 (**Annex 24.5.2, Figure 24.5-3**) this viewpoint was not progressed. Similarly, a panoramic photograph for this assessment (**Annex 24.5.1, Plate 24.5-34**) shows that vegetation and buildings restrict views towards these areas.

24.5.3 Relevant Policy and Guidance

8. A requirement for the assessment of impacts to heritage significance as a result of change in the setting of heritage assets is described in planning policy, including the National Planning Policy Framework (NPPF) (DLUHC, 2023) and associated Planning Practice Guidance (PPG): Historic Environment (DLUHC and MHCLG, July 2019). The Overarching National Policy Statement (NPS) for Energy (EN-1) (Department for Energy Security and Net Zero, 2023), also addresses the subject of the setting of heritage assets. These documents outline the importance of assessing heritage assets in a manner appropriate to their significance, and the contribution to heritage significance associated with an asset's setting, to better understand the potential impacts and associated effects (in Environmental Impact Assessment (EIA) terms) and ultimately acceptability of development proposals in this regard.
9. Industry standard guidance recommended by Historic England, in Historic Environment Good Practice in Planning Note 3: The Setting of Heritage Assets second edition (Historic England, 2017), defines setting as the surroundings in which a heritage asset is experienced. Its extent is not fixed and may change as the asset and its surroundings evolve. Elements of an asset's setting may make a positive or negative contribution to the significance of an asset, may affect the ability to appreciate that significance, or may be neutral.
10. Historic England's guidance also states that the setting of heritage assets changes over time. Understanding the history of change will help to determine how further development within the asset's setting is likely to affect the contribution made by setting to the significance of the heritage asset.

24.5.4 Proposed Onshore Converter Station Infrastructure

11. The Onshore Converter Station will likely comprise the following elements:
 - Valve Hall: A large warehouse building which houses converter station equipment for turning DC current to AC current;
 - Service Building: A warehouse / shed structure used for storage;
 - AC and DC yard: Areas at either end of the OCS with switchgear and harmonic filters;
 - Transformer area: Three to four large rectangular containers with concrete walls between;
 - Reactor yard: Numerous tall (c. 8m in height) steel structures;
 - Lighting protection towers; and
 - Valve cooling tower: Cooling equipment for the valve, typically a low height structure.
12. The indicative dimensions of the buildings that make up the OCS are listed below:
 - Valve Hall: 60m in length, 55m in width and 25m in height;
 - Service building: 55m in length, 20m in width and 15m in height;
 - Storage building: 30m in length, 20m in width and 15m in height; and
 - Lightning protection towers: 30m in height.
13. The parameters listed above would be the same for both OCS zones. The OCS zone will also include the ESBI, however this will not be taller than the infrastructure listed above (see **Volume 1, Chapter 4 Project Description** for further details). Further information on the ESBI with respect to heritage setting will be provided at ES stage.

24.5.5 Methodology

24.5.5.1 Screening Assessment

14. An initial screening assessment of heritage assets in the vicinity of the proposed OCS zones was undertaken and is presented in **Annex 24.5.3**.
15. The screening assessment first identified all designated heritage assets within a 5km Study Area from the OCS zones. Heritage assets located greater than 5km from the OCS zones were screened out at this stage. This was on the basis that harm, impacts and significant effects, from the Project are unlikely, as the distance from the OCS zones is too great to materially change setting and therefore impact heritage significance. A ZTV was then produced to determine those heritage assets where visibility of the OCS zones may be possible and experienced.
16. The ZTV was calculated to a height of 25m for the OCS zones (maximum building height of 25m; whilst some lightning protection masts would extend to 30m in height, these are unlikely to be perceptible in longer range views), from a viewing height of 2m above ground level.
17. The terrain model is based on Ordnance Survey (OS) Terrain 5 digital terrain model (DTM) data (5m grid, obtained from Ordnance Survey in August 2024), edited to create an indicative Digital Surface Model (DSM), incorporating:
 - Existing buildings, based on OS VectorMap Local building data with an assumed height of 8m for each building; and
 - Existing woodland, based on the woodland category of the Forestry Commission NFI 2022 dataset, with an assumed height of 15m for each type of woodland.
18. Earth curvature and atmospheric refraction have been taken into account. The ZTV was calculated using ArcPro 3.3.1 software.
19. In addition to the use of the ZTV, a desk-based exercise (qualitative consideration) of the heritage assets was undertaken, with the use of Google Earth and Bing maps.
20. Records of designated heritage assets were obtained from the National Record of the Historic Environment (NHRE) and the National Heritage List for England online (Historic England 2024).
21. Heritage assets located entirely outside the ZTV (but within the 5km Study Area) have been screened out, as have those where orientation and / or vegetation (where appropriate) would lead to no visibility / intervisibility and therefore no impacts.

22. As part of the screening assessment, a collaborative workshop was undertaken with the landscape specialists (see **Volume 1, Chapter 27 Landscape and Visual Impact**) on the Project. The aim of this was to further refine heritage specific viewpoints to capture appropriate specification photographs and develop subsequent photomontages at the ES stage, where required. At the time of writing, the photomontages were not available to inform the initial setting assessment, however block visualisations from CH1 Heavy Anti-aircraft gunsite, 350m west of Butt Farm (**Figure 27-15a to Figure 27-15d, Volume 1, Chapter 27 Landscape and Visual Assessment**) have been produced. Photomontages will, however, be available to inform the updated setting assessment presented at ES and will incorporate further design information of infrastructure in the OCS zone.
23. A site visit was undertaken in October 2024 to the OCS zones and the heritage assets identified through the screening assessment as requiring further consideration and assessment of potential changes to setting and associated heritage significance. Where peripheral elements of heritage assets lie within the ZTV, these assets have been screened out where the site visit confirmed there would be no anticipated harm, impacts and significant effects, created by the Project.
24. In addition to the observations made during the site visit, a 360° camera was used to capture views of the surrounding landscape from and of the heritage assets visited. These images have proved useful in providing a general perception and understanding of the immediate and wider landscape. A selection of the images captured are provided in **Section 24.5.6** and **Annex 24.5.1**.
25. Kinetic and dynamic views are also considered, where views of that nature contribute to the experience of the heritage asset when moving through the landscape (**Annex 24.5.2, Figure 24.5-4-d**).

24.5.5.2 Initial Setting Considerations

26. This initial setting assessment is undertaken in accordance with the Historic England advice presented in Historic Environment Good Practice in Planning Note 3: The Setting of Heritage Assets second edition (Historic England, 2017). This recommends a staged approach to the assessment of potential impacts on heritage significance (associated with a change in setting), and comprises the following five steps:
 - Step 1: Identify which heritage assets and their settings are affected;
 - Step 2: Assess the degree to which these settings and views make a contribution to the significance of the heritage asset(s) or allow significance to be appreciated;
 - Step 3: Assess the effects of the proposed development, whether beneficial or harmful, on the significance or the ability to appreciate it;

- Step 4: Explore the way to maximise enhancement and avoid or minimise harm; and
 - Step 5: Make and document the decision and monitor outcomes.
27. This initial setting assessment is intended to address Steps 1, 2, and 3. As the Project progresses and a decision on the location of the OCS zone is made, a re-evaluation of Step 3 will be undertaken at the ES stage. Step 4 will also be addressed at the ES stage.
28. Step 1 concluded that there are a total of 18 designated heritage assets whose heritage significance may be impacted through changes to their setting as a result of the operation of infrastructure in the OCS zone (i.e. its presence within the landscape post construction).
29. The 18 designated heritage assets identified through Step 1 are detailed in **Table 24.5** below and presented on **Annex 24.5.2, Figure 24.5-1**.

Table 24.5-1 Designated Heritage Assets Identified Through Step 1

| Heritage Asset | Distance to OCS Zone 4 | Distance to OCS Zone 8 |
|--|------------------------|------------------------|
| Bowl barrow 400m north of Highfield House (NHLE 1007731 – Scheduled Monument) | 1.7km | 3.5km |
| Beverley sanctuary limit stone, Bishop Burton cross (NHLE 1012589 – Scheduled Monument) | 3.3km | 3.4km |
| Beverley sanctuary limit stone, Bentley Cross (NHLE 1012590 – Scheduled Monument) | 2.6km | 1km |
| Beverley sanctuary limit stone, Walkington Cross (NHLE 1012591 – Scheduled Monument) | 500m | 1.3km |
| Ling Howe long barrow (NHLE 1015306 – Scheduled Monument) | 6.2km | 4km |
| Ella Hill round barrow (NHLE 1018622- Scheduled Monument) | 6.8km | 4.5km |
| ‘Cellar Heads’ moated site and related ridge and furrow earthworks at Risby Park, 700m north-west of Risby Park Farm (NHLE 1015312 – Scheduled Monument) | 2.6km | 140m |

| Heritage Asset | Distance to OCS Zone 4 | Distance to OCS Zone 8 |
|---|------------------------|------------------------|
| Risby Hall (NHLE 1001419 – Grade II Registered Park and Garden), Risby Jacobean gardens, hall and medieval settlement remains (NHLE 1018600 – Scheduled Monument) | 2km | 0m |
| Heavy Anti-aircraft gunsite, 350m west of Butt Farm (NHLE 1019186 – Scheduled Monument) | 1.2km | 780m |
| The Minster Church of St John (Beverley Minster) (NHLE 1084028 – Grade I Listed Building) | 2km | 4km |
| Walkington Conservation Area | 2.8km | 800m |
| Church of All Hallows (NHLE 1161425 Grade II* Listed Building) | 3km | 900m |
| The Black Mill (NHLE 1310087 – Grade II Listed Building) | 1.8km | 2.8km |
| Old Hall (NHLE 1103420 – Grade II Listed Building) including associated buildings at Low Hall (NHLE 1103419, 1310090, 1346992 – Grade II Listed Buildings) | 400m | 3km |

24.5.5.3 Temporary Change to the Setting of Heritage Assets During Construction

30. Activities undertaken as part of construction works for the Project have the potential to impact designated and non-designated heritage assets through a temporary change in their setting which may affect their heritage significance. Temporary changes in the setting of heritage assets, should they occur, may do so for example through the presence of machinery, construction traffic and general construction activities taking place within and adjacent to the Onshore Development Area. The sight, sound, any dust created, and even smell, during the construction phase has the potential to temporarily change the setting of heritage assets and their associated heritage significance.
31. A review of assets potentially impacted by construction activities will be undertaken as part of the ES, once the Onshore Development Area is further refined and locations of possible temporary construction compounds confirmed.

24.5.6 Assets and Findings

24.5.6.1 Bowl Barrow 400m North of Highfield House (National Heritage List for England 1007731 – Scheduled Monument)

2.5.6.1.1 Identification of the Heritage Asset (Step 1)

32. The Scheduled bowl barrow is located c. 1.7km north-west from OCS Zone 4 and c. 3.5km west from OCS Zone 8 on arable farmland.
33. The prehistoric bowl barrow is the only visible barrow on Hall Ings, although antiquarian sources have suggested that originally several barrows could be seen here. The barrow mound is approximately 1m high and 27m in diameter with the outer ditch surviving as a buried feature 4m wide.

2.5.6.1.2 Significance of the Heritage Asset (Step 2)

34. The importance of the asset is recognised by its designation as a Scheduled Monument. Its significance derives predominantly from its archaeological interest as it will retain information on its original form and function, and manner and duration of its usage. It also contributes to an understanding of the wider group of barrows in this area.
35. The barrow is located within an open, agricultural landscape with a number of modern industrial structures (e.g. Creyke Beck National Grid Substation and pylons, the train line, A1079 road etc.) dominating the wider landscape to the north, south and west, which diminishes from its setting.
36. The bowl barrow, along with the wider group of barrows would have been constructed with conscious consideration of their surrounding landscape and so views of and from the barrow would have likely been important during the prehistoric period, however, the extent to which the barrow was visible and in turn appreciated is unknown.
37. When moving within the landscape around the asset (**Annex 24.5.1, Plate 24.5-1**), the primary views of the Scheduled barrow are only achievable in proximity to it from private land where it is visible only as a surviving historic earthwork.
38. It is considered that the asset's immediate setting contributes to its heritage significance to some extent (a relatively small degree), however, it is really its archaeological interest and relationship with a wider group of barrows in the area, which contribute more materially to its heritage significance.

2.5.6.1.3 Predicted Change to the Setting of the Assets and Potential Impacts to Heritage Significance (Step 3)

39. Views of the OCS zones are restricted by intervening woodland, tree lined hedgerows, and the Yorkshire Coast railway line to the east and A1079 road to the north.
40. Given the limited views of the OCS zones and the existing modern developments within the broader landscape, the introduction of the infrastructure within either OCS zone is unlikely to materially change its current setting and impact its heritage significance which is predominantly drawn from its archaeological interest.

24.5.6.2 Beverley Sanctuary Limit Stone, Bishop Burton Cross (National Heritage List for England 1012589 – Scheduled Monument)

2.5.6.2.1 Identification of the Heritage Asset (Step 1)

41. Bishop Burton Cross is located c. 3.3km north-west from OCS Zone 4 and c.3.4km north from OCS Zone 8. The cross comprises a 2m high surviving limestone shaft set upon a metre square stone base with bevelled shoulders, and it has engaged shafts and semi-rounded corners which each bear a single vertical grooved line (**Annex 24.5.1, Plate 24.5-2**).
42. It is located about 10m inside a field, beyond a boundary hedge along the south side of the A1035, between the village of Killingwoldgraves and the Beverley racecourse, and is enclosed by a wooden fence.
43. The sanctuary limit cross stone dates to the medieval period and is one of three surviving crosses (out of an original four) which defined the boundary where the accused could seek sanctuary of the church and seek pardon for their misdemeanours.

2.5.6.2.2 Significance of the Heritage Asset (Step 2)

44. The importance of the asset is recognised by its designation as a Scheduled Monument. Its significance derives predominantly from its archaeological, historic and architectural interests.

45. Despite post Elizabethan damage, including the loss of the cross head, the Bishop Burton cross survives reasonably well and still retains architectural medieval decoration pertaining to its 13th century date. The cross stands in its original position and therefore likely preserves archaeological information on its original setting, which could further contribute to an understanding of its original function.
46. The concept of church sanctuary dates to Anglo-Saxon times, allowing criminals to seek protection and pardon within church grounds. At Beverley, the sanctuary area was marked by stones, with fines imposed on pursuers who violated these boundaries, escalating as they neared the church. Criminals could stay in sanctuary for 30 days to seek pardon, after which they were escorted out if pardon was not granted. Beverley, along with Ripon, Hexham, York, and Durham, were notable sanctuary refuges, with York and Durham's sanctuaries starting at the church door. The preservation of the Beverley Sanctuary Limit Stones, and the Sanctuary Chair still remaining at Beverley Minster, is unusual and increases the archaeological and historical interest of the monument.
47. The asset's location just set back from the modern York Road forms its immediate setting with the village of Bishop Burton to the west and Beverley to the east and contributes to the ability to appreciate its historic function and importance whilst moving in and out of Beverley along York Road.

2.5.6.2.3 Predicted Change to the Setting of the Assets and Potential Impacts to Heritage Significance (Step 3)

48. The Bishop Burton Cross is located over 3km from both OCS zones and as such it is anticipated that any visibility of the zones will be very limited.
49. The Scheduled Monument is best appreciated from its original roadside setting between Beverley and Bishop Burton which allows the viewer to further appreciate its historical interest. The wider landscape (outside its immediate area) is not considered to contribute to the asset's heritage significance and therefore the location of both OCS Zones 4 and 8 is not considered to alter any elements of its setting that contribute to its significance.

24.5.6.3 Beverley Sanctuary Limit Stone, Walkington Cross (National Heritage List for England 1012591 – Scheduled Monument)

2.5.6.3.1 Identification of the Heritage Asset (Step 1)

50. Walkington Cross is located c. 2.6km west from OCS Zone 4 and c.1km north from OCS Zone 8. As with the Bishop Burton Cross, it is of medieval date and is one of three surviving crosses which defined the boundary where sanctuary within Beverley would be provided (as outlined in **Section 24.5.5.2** above).

2.5.6.3.2 Significance of the Heritage Asset (Step 2)

51. The importance of the asset is recognised by its designation as a Scheduled Monument. Its significance derives predominantly from its archaeological, historic and architectural interests.
52. The Scheduled Monument is very weathered, surviving as a stumped portion of the original stone shaft having lost the cross head sometime after the early 16th century. It is relatively well maintained with a plaque to explain the significance of the stone and is fenced with some low (approximately 0.4m high) wrought iron railings, which adds to its general aesthetic interest (**Annex 24.5.1, Plate 24.5-3**).
53. It is likely that the cross stands in its original position and therefore likely preserves archaeological information on its original setting, which could further contribute to an understanding of its original function. The preservation of the Beverley Sanctuary Limit Stones, and the Sanctuary Chair still remaining at Beverley Minster, is unusual and increases the archaeological and historical interest of the monument.
54. Its roadside location forms its immediate setting. The village of Walkington to the west and Beverley to the east form the asset's wider setting and contribute to the ability to appreciate the asset's function and importance.

2.5.6.3.3 Predicted Change to the Setting of the Assets and Potential Impacts to Heritage Significance (Step 3)

55. The Scheduled Monument is located next to a hedgerow adjacent to a row of trees to the east, both of which restrict any views towards both OCS Zones 4 and 8.
56. The Scheduled Monument is best appreciated from its roadside setting, which is situated between Beverley and Walkington. The wider landscape (outside its immediate area) is not considered to contribute to the asset's heritage significance and therefore the location of both OCS Zones 4 and 8 is not considered to alter its setting or detract from its heritage significance.

24.5.6.4 Beverley Sanctuary Limit Stone, Bentley Cross (National Heritage List for England 1012590 – Scheduled Monument)

2.5.6.4.1 Identification of the Heritage Asset (Step 1)

57. Bentley Cross is located c. 500m south-west from OCS Zone 4 and c. 1.3km north-east from OCS Zone 8. At the time of the site walkover, roadworks on the A164 as part of the Jocks Lodge Road Improvement Scheme prevented access to the asset.
58. As with the Walkington and Bishop Burton Crosses, the Bentley Cross is of medieval date and defined the outer sanctuary boundary of Beverley.

2.5.6.4.2 Significance of the Heritage Asset (Step 2)

59. The importance of the asset is recognised by its designation as a Scheduled Monument. Its significance derives predominantly from its archaeological, historic and architectural interests.
60. Similar to the Walkington and Bishop Burton Crosses, it is very weathered although it appears to retain architectural medieval markings pertaining to its 13th century date. It also survives as a stumped portion of the original stone shaft having lost the cross head sometime after the early 16th century (**Annex 24.5.1, Plate 24.5-4**). It is mounted on a modern stone base having been moved from its original location on the other side of the A164 during a road improvement scheme.
61. Although moved from its original location it forms part of a group of sanctuary limit stones, the preservation of which, including the Sanctuary Chair at Beverley Minster, is unusual and increases the archaeological and historical interest of the monument.

62. Its roadside location forms its immediate setting with the villages of Bentley to the south and Beverley to the north contributing to the ability to appreciate the asset's historic function and importance.

2.5.6.4.3 Predicted Change to the Setting of the Assets and Potential Impacts to Heritage Significance (Step 3)

63. Views from the Scheduled Monument towards the OCS zones are restricted by tall hedgerows lining the A164. Additionally, its roadside location was intended to ensure that the sanctuary limit stone could be seen from the road, marking the boundary of sanctuary within Beverley.
64. The appreciation of the Scheduled Monument is derived from its roadside setting and its location between Beverley and Bentley. However, it is not easily or safely accessible. The wider landscape does not contribute to the asset's heritage significance, and therefore, the locations of both OCS zones are not considered to alter its setting or detract from its heritage value.

24.5.6.5 Ling Howe Long Barrow (National Heritage List for England 1015306 – Scheduled Monument)

2.5.6.5.1 Identification of the Heritage Asset (Step 1)

65. Ling Howe long barrow is located c. 6.2km west from OCS Zone 4 and c. 4km west from OCS Zone 8 on the higher ground within the eastern extent of the Yorkshire Wolds.
66. The monument includes a Neolithic long barrow, 250m north-west of Lion's Den Farm. Although greatly altered and reduced in height by modern arable ploughing, the monument still survives as a slight mound at the northern edge of a field, and as a low rise in the field boundary which overlies it. The northern end of the monument is overlain by the modern B1230 road.

2.5.6.5.2 Significance of the Heritage Asset (Step 2)

67. The importance of the asset is recognised by its designation as a Scheduled Monument. Its significance derives predominantly from its archaeological interest as it will retain information on its original form and function, and manner and duration of its usage. It also contributes to an understanding of the wider group of barrows in this area including Ella Hill round Barrow (NHLE 1018622), and those further north at Littlewood Lodge (NHLE 1007563) and Cow Wold Road (NHLE 1007563 & 1011905).

68. The barrow is located within an open, agricultural landscape, with modern infrastructure including modern farm buildings, a wind turbine, and overhead lines (**Annex 24.5.1, Plate 24.5-5**) in views to the east and is overlain by the modern B1230 road at its northern end, which diminishes from its setting.
69. The bowl barrow, along with the wider group of barrows would have been constructed with conscious consideration of their surrounding landscape and elevated position on the Wolds edge. Views of, and from, the barrow across Holderness would have likely been important during the prehistoric period, however, the extent to which the barrow was visible and in turn appreciated is unknown.
70. It is considered that the asset's immediate setting contributes to its heritage significance to a relatively small degree in terms of allowing the viewer to see the site in a regional distinctive rural setting. However, it is really its archaeological interest, relationship with the wider group of barrows on the Wolds edge, which contribute more materially to its heritage significance.

2.5.6.5.3 Predicted Change to the Setting of the Assets and Potential Impacts to Heritage Significance (Step 3)

71. With the elevated position of the Scheduled Monument on the edge of the Wolds it is possible that views of the tallest structures within the OCS zones may be achievable above the existing tree line in views of the wider landscape. The presence of the OCS zones in this landscape represents more a matter of visual amenity than setting contributing to heritage significance, as the significance of the asset is considered to derive largely from its subsurface archaeological interest. The slight change in view towards the east is not considered to change the existing setting of the asset and / or its heritage significance.

24.5.6.6 Ella Hill Round Barrow (National Heritage List for England 1018622- Scheduled Monument)

2.5.6.6.1 Identification of the Heritage Asset (Step 1)

72. Ella Hill round barrow is located c. 6.8km west from OCS Zone 4 and c. 4.5km west from OCS Zone 8. The asset is situated in a gently undulating open rural landscape on the edge of the Yorkshire Wolds with a modern farm located approximately 200m to the south-west and Littlewood Road 250m to the south-east (**Annex 24.5.1, Plate 24.5-6**).
73. The monument comprises a Late Neolithic to Late Bronze Age Bowl Barrow measuring 3m high and with a diameter of 23m. It is located within the wooded intersection of four fields and, unusually for barrows in this area, the monument survives well and appears to have never been excavated.

2.5.6.6.2 Significance of the Heritage Asset (Step 2)

74. The importance of the asset is recognised by its designation as a Scheduled Monument. Its significance derives predominantly from its archaeological interest as potentially, having never been excavated, it will retain significant archaeological information on its original form, function, manner / duration of use and of any possible burials placed within it.
75. The asset also contributes to an understanding of the wider group of barrows in this area including Ling Howe long barrow (NHLE 1015306) to the south, and those further north at Littlewood Lodge (NHLE 1007563) and Cow Wold Road (NHLE 1007563 & 1011905).
76. The bowl barrow, along with the wider group of barrows would have been constructed with conscious consideration of their surrounding landscape and elevated position on the Wolds edge. Views of, and from, the barrow across Holderness would have likely been important during the prehistoric period, however, the extent to which the barrow was visible and in turn appreciated is unknown.
77. It is considered that the asset's immediate setting contributes to its heritage significance to a relatively small degree in terms of allowing the viewer to see the site in a regional distinctive rural setting. However, it is really its archaeological interest, relationship with the wider group of barrows on the Wolds edge, which contribute more materially to its heritage significance.

2.5.6.6.3 Predicted Change to the Setting of the Assets and Potential Impacts to Heritage Significance (Step 3)

78. The Ella Hill round barrow is currently located within a wooded area (**Annex 24.5.1, Plate 24.5-6**) which restrict views towards both OCS zones. Similarly views towards the OCS zones are obstructed by further woodland and hedgerows to the east (**Annex 24.5.1, Plate 24.5-7**).
79. Given the limited views of the OCS zones, it is considered that any changes to its current setting that contribute to its significance would be minimal.

24.5.6.7 ‘Cellar Heads’ Moated Site and Related Ridge and Furrow Earthworks at Risby Park, 700m North-West of Risby Park Farm (National Heritage List for England 1015312 – Scheduled Monument)

24.5.6.7.1 Identification of the Heritage Asset (Step 1)

80. Cellar Heads moated site is located c. 2.6km south-west from OCS Zone 4 and c. 140m west from OCS Zone 8.
81. Cellar Heads moated site is located to the north of Risby Hall and gardens, and is thought to be the predecessor to it, forming part of the original manorial estate. The moated site is situated adjacent to a public footpath and is set away from busy roads representing a quiet rural setting with the distinctive Wolds landscape as a backdrop to the west. **Annex 24.5.1, Plate 24.5-8 to Plate 24.5-15** present a series of panoramic views when moving along the public footpath to the south of the Cellar Heads moated site (**Annex 24.5.2, Figure 24.5-4**).

24.5.6.7.2 Significance of the Heritage Asset (Step 2)

82. The Cellar Heads moated site retains archaeological interest as it includes a moated enclosure and associated ridge and furrow earthworks at Risby Park. It also has historic interest as the name ‘Cellar’ is thought to refer to a building of some size and importance and given that Sir Ralph Ellerker was responsible for the creation of a deer park at Risby in the mid-16th century, it is supposed that the monument may be the surviving remains of the mansion where Henry VIII is known to have stayed.
83. The Scheduled Monument holds a historical association with Risby Hall (NHLE 1001419), Risby Jacobean gardens, hall and medieval settlement remains (NHLE 1018600). The hall and gardens were constructed in the mid-1680s to replace the moated manor house at Cellar Heads.
84. Although quarrying activities in the past have resulted in the destruction of the northern side of the enclosure and disturbance to the central area of occupation, the remaining three arms of the moat survive well.
85. The monument is situated on the southern side of a deep glacial valley which formed part of the deer park it was situated within. The deer parkland would have been surrounded by a fenced boundary or ‘pale’ and included woods, ponds and grass and arable land within its rolling landscape. The glacial valley would have provided a natural deer course where deer were driven along a specially designated course towards the hunters.

86. The building would likely have been around two or three storeys and there would likely have been extensive views from the north over the deer park to Walkington and south back to Ellerker's main manor complex (NHLE 1018600).
87. When approaching from the west along the public footpath, orientated north-east to south-west (**Annex 24.5.1, Plate 24.5-10**), the historical association between the Cellar Heads site and Ellerker's main manor complex (NHLE 1018600) to the south can be appreciated (with a degree of prior knowledge). Due to topography and woodland plantations, the asset is largely screened when approaching from the east (**Annex 24.5.1, Plate 24.5-8 and Plate 24.5-9**).
88. There are limited modern distractions whilst moving along the public footpath to the east of the asset (noting the presence of overhead telephone lines to the south).
89. A review of historical mapping suggests that the intervening field between the deer parkland (including the Cellar Heads site and Ellerker's main manor complex) once formed part of the parkland when the deer park was absorbed into the landscaped grounds of Risby Hall. This area is now active arable farmland (**Annex 24.5.1, Plate 24.5-13**) however the historical association between the two sites is still partially perceivable with some prior understanding of the sites when moving through the area.
90. Similarly, whilst looking north across the asset the historical and functional relationship between the moated site and the former deer parkland, including the deep glacial valley, can be readily appreciated.

24.5.6.7.3 Predicted Change to the Setting of the Assets and Potential Impacts to Heritage Significance (Step 3)

91. The Cellar Heads moated site is located approximately 140m to the west of OCS Zone 8 in which views of the north of OCS Zone 8 are restricted by woodland but views to the southern portion of OCS Zone 8 are achievable. Views towards OCS Zone 4 are more limited by intervening vegetation, topography and the A1709 / A164 road network.

92. The asset was strategically positioned on the southern side of a glacial valley and holds historical connections with the deer park to the north and Risby Park to the south. The introduction of OCS Zone 8 to the east would not directly change these relationships however it would change wider views where both the Cellar Heads site and Risby Jacobean gardens, hall and medieval settlement remains (NHLE 1018600) can be appreciated in their rural, agricultural landscape (**Annex 24.5.1, Plate 24.5-10**). This large-scale landscape character change within the asset's wider setting, including around and partly within the historical limits of the deer park, will adversely change the asset's immediate setting and detrimentally alter its wider setting when viewed from other locations within the landscape.
93. The Cellar Heads moated site will be revisited in more detail and considered further once the design of infrastructure in the OCS zone is further progressed in terms of location, layout, height, massing etc. as part of an update and further progression of the settings assessment work and reported on as part of the ES.

24.5.6.8 Risby Hall (National Heritage List for England 1001419 – Grade II Registered Park and Garden), Risby Jacobean Gardens, Hall and Medieval Settlement Remains (National Heritage List for England 1018600 – Scheduled Monument)

24.5.6.8.1 Identification of the Heritage Asset (Step 1)

94. The Grade II Risby Hall Registered Park and Garden is located c. 2km south-west of OCS Zone 4 and immediately to the south of OCS Zone 8.
95. The formal gardens are part of the designed landscape of the former Risby Hall which is thought to have been constructed in the late 17th century. The gardens survive in the form of earthworks; formal canals and walkways probably of similar date, and pleasure grounds with lakes probably of late 18th century date. The Park is bounded by a sunk fence in the north-west, thought to be the remains of a park pale, the southern boundary comprises Dunflat Road and Risby Grange Farm. A 20th century fence forms the northern boundary between the park and arable land to the north.
96. The eastern half of the park contains three lakes currently used by a popular fishing club, with a café, covered picnic area and car park within the centre of the site (**Annex 24.5.1, Plate 24.5-17**). There is a folly (NHLE 1161815) located to the east within this area which is impressive and provides a visual connection to the historical relationship between the area and the wider landscape parklands of Risby Hall.

97. Within the western extent of the Registered Park and Garden lies the site of Risby Hall, a Scheduled Monument (NHLE 1018600) that includes the 17th century Jacobean gardens, the site of the hall itself and the earthworks of part of the medieval settlement of Risby (**Annex 24.5.1, Plate 24.5-20**). The medieval settlement was recorded in the Domesday Book as having been sold to the Archbishop of York and then granted to Beverley Minster. The manor was passed to the Ellerker family in 1401, where it remained until 1655 when it was transferred to Sir James Bradshaw. He built Risby Hall and laid out the surrounding gardens in the mid-1680s to replace the moated manor house at Cellar Heads to the north. The hall was destroyed by fire in the late 1770s, rebuilt, and then burnt to the ground a second time in the early 1780s. The last surviving buildings were demolished in the 1980s.

24.5.6.8.2 Significance of the Heritage Asset (Step 2)

98. The importance of Risby Hall is recognised by its designation as a Registered Park and Garden incorporating the Scheduled Monument of Risby Hall and associated Jacobean Garden, and medieval settlement of Risby. The heritage significance of the Registered Park and Garden derives from its historic connection with Risby Hall, the Cellar Heads site and its archaeological and artistic interests.
99. The 17th century garden earthworks at Risby Hall are well preserved and a fine example of Jacobean Garden design adding to their archaeological interest. Their historic interest is enhanced by the early 18th century print depicting the gardens and mid-18th century description by Arthur Young. The earthwork survival of the hall's predecessor at Cellar Heads to the north, along with fragments of the deer park boundary and medieval village, also add to the importance of the Scheduled Monument.
100. In 1768, Eaton Ellerker hosted the agricultural writer Arthur Young at Risby. Young documented the house and grounds, along with Ellerker's planned landscape improvements. These included eliminating the divisions between the house and park to the north and flooding the valley south of the house to create a lake clearly visible from the house.
101. The setting for these designated heritage assets is within a wider rural and agricultural landscape in which their historic, archaeological and artistic interests can be appreciated. Views of the wider landscape from Risby Hall and its park and gardens would likely have been important and enhanced its status as a stately country residence.
102. A review of historic mapping suggests that there were no designed views in a north or north-easterly direction, towards the OCS zones, with a wooded area forming its northern and eastern boundary. It also appears the front elevation to Risby Hall faced south-eastwards.

24.5.6.8.3 Predicted Change to the Setting of the Assets and Potential Impacts to Heritage Significance (Step 3)

103. Views towards OCS Zone 4 are not visible or easily achievable from the immediate vicinity of the park. OCS Zone 8, located directly to the north of the asset would allow for glimpse views and general perceptibility while within the parkland (**Annex 24.5.1, Plate 24.5-18**) and views from the elevated land on the southern valley edge looking north (**Annex 24.5.1, Plate 24.5-16**).
104. The land slopes down to a valley in the central portion of the site, which was flooded to create the fishponds. These designed views, looking down and along the ponds within the park (**Annex 24.5.1, Plate 24.5-19**), enhance the viewer's artistic appreciation of the site (intended to be seen while looking east from Risby Hall) and would remain unchanged by the introduction of OCS Zone 8 to the north. Similarly, the archaeological and historical interest in the relationship between the gardens, the site of the hall, and the medieval settlement remains would largely remain unaffected by the presence of OCS Zone 8 to the north.
105. The Risby Jacobean gardens, hall and medieval settlement remains (NHLE 1018600) derive their significance predominantly from their archaeological evidential value and general association with Risby Hall Park and Garden, they would also be largely screened by the wooded areas of the Parkland in views towards OCS Zone 8. There would however be a degree of change of the landscape of their wider setting where viewers can (with a degree of prior knowledge) appreciate the historical relationship between the Cellar Heads site and the asset.
106. The park's current setting can still be appreciated as largely rural and agricultural bounded by arable farmland to the north and east. This is most readily perceived when moving around the south-west of the site (**Annex 24.5.1, Plate 24.5-20**) due to the plantation woodland mostly screening views towards the north from the fishponds and Folly (**Annex 24.5.1, Plate 24.5-18**). Depending on the exact positioning of infrastructure within OCS Zone 8, there will be an adverse change to the asset's immediate isolated rural setting and its wider setting when viewed from other locations within the landscape. This includes views from Dunflat Road to the south and from the public footpath running between Risby Park and Garden and Cellar Heads moated site to the north (**Annex 24.5.1, Plate 24.5-10**).
107. Risby Hall Registered Park and Garden and Risby Jacobean gardens, hall and medieval settlement remains will be revisited in more detail and considered further once the design of infrastructure in the OCS zone is further progressed in terms of location, layout, height, massing etc. as part of an update and further progression of the settings assessment work and reported on as part of the ES.

24.5.6.9 Heavy Anti-Aircraft Gunsite, 350m West of Butt Farm (National Heritage List for England 1019186 – Scheduled Monument)

24.5.6.9.1 Identification of the Heritage Asset (Step 1)

108. The Heavy Anti-Aircraft (HAA) gunsite is located c. 1.2km west of OCS Zone 4 and c. 780m north-east of OCS Zone 8.
109. The gunsite was known as Station H31 and Walkington gunsite in official records. It is first mentioned in the War Diary of the HAA Divisional General Staff on 13 October 1941 when it was in the control of 173 / 62 Battery (173 Battery of 62 HAA Regiment). On 14 July 1942, the station passed to 514 / 151 Battery which used it for its Battery HQ, with control over two other nearby HAA gunsites. This battery was from a mixed sex Regiment which used women from the Auxiliary Territorial Service (ATS) to operate radar, communications systems and other support roles with men operating the guns.
110. Between late June and November 1942, Station H31 served as a training ground, providing batteries from across the country with operational experience. By the war's end, Station H31 was under the control of the 152 Regiment and was equipped with six 3.7-inch Mk. IIc guns, four of which were emplaced, while two were kept off-site.
111. In January 1946, it was confirmed that Station H31 would be one of the 192 HAA gunsites in England retained as part of the post-war Nucleus Force. However, the number of these gunsites was further reduced in the following years, and Station H31 was likely abandoned by 1950, by which time only 78 gunsites remained operational nationwide.
112. The gun emplacements and command post are all constructed of brick with flat concrete roof sections and concrete floors (**Annex 24.5.1, Plate 24.5-21**). They broadly follow standard designs. The four gun emplacements are arranged in an arc around the north-west side of the command post which also faces north-west.

24.5.6.9.2 Significance of the Heritage Asset (Step 2)

113. The importance of the asset is recognised by its designation as a Scheduled Monument. Its significance derives predominantly from its historic and architectural interests.
114. The HAA gunsite, is a well-preserved example of a mid-WWII gunsite, retaining the functional core of the station, the command post and gun emplacements. It is largely all above ground with some sub-surface / below ground aspects of the gunsite, those being recesses and duty shelters for the gun crew.

115. The asset holds historical interest, being well documented in modern history recorded as having a key role as the Battery Headquarters for 514 / 151 Battery in 1942, and in training other batteries from around the country in operations. The site's location on the north-west edge of Hull's principal anti-aircraft defences meant that the principal arcs of fire were over the more open country to the north and west of the city. The asset still offers unobstructed views of the sky all round, but particularly to the principal arc of fire from south-west to north-east, away from Hull and Beverley and the huddled accommodation and radar mat, to minimise the potential for collateral damage from falling shrapnel and blast.
116. The site is one of 60 well-preserved examples of HAA gunsites within England and as such it is sufficiently rare to be considered of national importance. The current setting of the gunsite contributes to its value through its rural context and its orientation to defend the skies to the north and west of Hull.
117. Its original location within an open, agricultural landscape adjacent to Butt Farm can still be appreciated noting several overhead lines in this area which are moderate detractors to its setting. When looking back south across the site from a public footpath to the north, the low form of the site is mostly screened by hedgerows (**Annex 24.5.1, Plate 24.5-22 and Plate 24.5-23**) with the asset best appreciated from within the field to the south-east within the HAA sites historical limits.
118. During the walkover it was noted that the caravan campsite and road noise from the A1079 does detract from this to a degree. Additionally, much of the associated military infrastructure, such as the radar mat, which would have been present to the south no longer survives as above ground remains.
119. The Scheduled Monument is accessed via its original brick and clinker track built during the 1940s, which enhances the appreciation of the asset.

24.5.6.9.3 Predicted Change to the Setting of the Assets and Potential Impacts to Heritage Significance (Step 3)

120. The Scheduled Monument is located in between both OCS zones (c. 1.2km west of OCS Zone 4 and c. 780m north-east of OCS Zone 8). Block visualisations (**Figure 27-15a to Figure 27-15d, Volume 1, Chapter 27 Landscape and Visual Assessment**) show that there is potential for views looking west toward OCS Zone 4 (**Figure 27-15b**) from the asset, but that intervening woodland restricts all visibility of OCS Zone 8 (**Figure 25-15d**).

121. The key contributing elements of the setting to the significance of the Heavy Anti-aircraft gunsite include the appreciation of (with a degree of prior knowledge) the wider layout of the site, including the relationship of the scheduled gun emplacements to the non-extant hutted accommodation, radar mat and Butt Farm. Also, key views out from the Heavy Anti-aircraft gunsite to the north and west reflecting its historical field of fire are key contributors to the asset's significance.
122. The block visualisation (**Figure 27-15b**) shows that the higher elements of OCS Zone 4 would be visible when looking east from the Heavy Anti-aircraft gunsite but would not appear prominently above the existing skyline. These views are also distorted by the presence of overhead telephone lines and electricity pylons which are the dominating feature in this view. The visibility of OCS Zone 4 is judged to only result in a minor change to the wider landscape setting of the asset.
123. At present, the operation (presence) of OCS Zone 4 and the subsequent predicted change to the wider landscape setting to the east of the asset is not considered to significantly alter its setting or the ability to experience and appreciate it to such an extent as to significantly impact its heritage significance.

24.5.6.10 The Minster Church of St John (Beverley Minster) (National Heritage List for England 1084028 – Grade I Listed Building)

24.5.6.10.1 Identification of the Heritage Asset (Step 1)

124. Beverley Minster is located within the Beverley Conservation Area, approximately 2km north of OCS Zone 4 and c. 4km north-east of OCS Zone 8.
125. The parish church is Grade I Listed and comprises a 13th century eastern arm, a 14th century nave, a 14th-15th century north porch and western front, and a 15th century eastern window and north-eastern chapel. It is constructed of Tadcaster magnesian limestone incorporating some oolitic limestone from the earlier structure and some chalk (**Annex 24.5.1, Plate 24.5-24**).

24.5.6.10.2 Significance of the Heritage Asset (Step 2)

126. Beverley Minster is a prominent landmark that significantly contributes to the town's wider setting and associated heritage assets. It holds considerable archaeological, historic, and artistic interest and is one of the strongest examples of medieval ecclesiastical Gothic architecture in the region, arguably as historically significant as York Minster.

127. The heritage importance of Beverley Minster is recognised by its Grade I Listed Building status. The medieval building and parish church has historical ties to St John of Beverley, who founded a nearby monastery in the 8th century. His remains lie in a vault under the nave, and there are numerous historical accounts of his connection to the English crown. Notably, King Athelstan, Alfred the Great's grandson, is said to have prayed at St John's tomb in 937 before his victory against the Scottish Army, with St John's banner carried into battle by the men of Yorkshire.
128. By 1266 it was customary for one man from the Minster to be sent with St John's banner when the King summoned an army. After the battle of Agincourt (1415), King Henry V visited St John's shrine to give thanks and made him a patron saint of the Royal family. The cult of St John, like all other saints, was abolished by Henry VIII, who robbed and destroyed his tomb and shrine. His bones, rediscovered in 1664, were re-interred in their present tomb between the nave choir stalls.
129. The Minster is the focal point of Beverley's historical interest and significance, with the town's oldest roads converging on it, often still cobbled in form (**Annex 24.5.1, Plate 24.5-26**). This, along with the historic street names, intervisibility with St Mary's Church to the west, Hall Garth moated site (**Annex 24.5.1, Plate 24.5-25**), directly adjacent to the Minster, and the large number of contemporary buildings along the nearby streets to the north, all contribute to a relatively intact historic setting, which is a contributor to the Minster's heritage significance.
130. Beverley Minster can also be experienced as a prominent feature from the surrounding landscape. These views allow the church to be appreciated in its historic role as the spiritual and physical focal point of its parish, adding further to the historic interest in the asset. Long distance views of and from the church across the landscape are also achievable.
131. The primary function of the church is as a place of worship, therefore long-range views of the church are key to its appreciation as a beacon to worshippers. As such, views from the church into the wider landscape are not considered to be such a key component to its setting and ability to appreciate its significance as views to it in which this aspect of its setting is manifest.
132. While the setting of the church is considered to be an important contributor to its significance through its intervisibility and historic relationship with St Mary's Church, Beverley and the historic townscape visible within the immediate environs of the Minster. Long range views from the church towards the wider landscape are not considered to be a key contributor to its setting, representing more a matter of visual amenity.

24.5.6.10.3 Predicted Change to the Setting of the Assets and Potential Impacts to Heritage Significance (Step 3)

133. Views to the OCS zones are not obtained or obviously achievable when within the immediate locality of Beverley Minster, however, views are afforded from the rooftop which (when accessible) provide panoramic views of the wider landscape. It was identified that views of the OCS zones would be achievable from this location. However, again these represent more a matter of visual amenity than setting contributing to heritage significance.
134. The OCS zones are also likely to fall within views of Beverley Minster from the surrounding landscape and other heritage assets. The visual intrusion of the OCS Zones 4 and 8 is likely to diminish the appreciation of the Minster when viewed within its wider landscape setting. However, this is not considered to significantly impact its heritage significance, which is derived largely from its architectural, archaeological, artistic and historic interests, as well as its immediate setting.
135. This asset will, however, be revisited in more detail and considered further once the design of infrastructure in the OCS zone is further progressed in terms of location, layout, height, massing etc. as part of an update and further progression of the settings assessment work and reported on as part of the ES.

24.5.6.11 Walkington Conservation Area

24.5.6.11.1 Identification of the Heritage Asset (Step 1)

136. Walkington Conservation Area is located c. 2.8km west of OCS Zone 4 and c. 800m north-west of OCS Zone 8.
137. The village of Walkington forms a linear pattern and retains evidence for its rural origins, with the historical core of the village still containing the remains of 18th century enclosed field systems. The architecture is a mix of 18th and 19th century vernacular styles, alongside more modern developments, which are in-keeping with the village's architectural style (**Annex 24.5.1, Plate 24.5-27 to Plate 24.5-29**).

24.5.6.11.2 Significance of the Heritage Asset (Step 2)

138. The importance of the asset is recognised by its designation as a Conservation Area which also incorporates eight Listed Buildings including the Grade II* Listed Church of All Hallows (NHLE 1161425, **Annex 24.5.1, Plate 24.5-30**). Its significance derives predominantly from its historic and architectural interests which contribute to its character and appearance.

139. The village blends into the surrounding countryside through a gradual transition from rural countryside to built form. It offers a sense of openness with its dispersed buildings set back within boundaries, and areas of open land whilst also providing a sense of enclosure created by sunken roads, boundaries, hedges and trees.
140. Appreciation of the heritage significance of the Conservation Area and its setting is experienced from the public open spaces within the village. The surrounding open, agricultural landscape which offers long distance views, forms the wider setting of the Conservation Area and contributes to the ability to appreciate the asset's rural origins.

24.5.6.11.3 Predicted Change to the Setting of the Assets and Potential Impacts to Heritage Significance (Step 3)

141. The southern and eastern extents of the Conservation Area are bound by modern residential development which restrict views outwards. Beyond the Conservation Area to the south of the village, wooded areas and tree-lined hedgerows further limit views towards the OCS zones (**Annex 24.5.1, Plate 24.5-31** and **Plate 24.5-32**).
142. The wider landscape is not deemed to significantly contribute to the heritage significance of the Conservation Area, which primarily derives from its historic and architectural interests. Therefore, the location of both OCS zones is not considered to alter its setting or the ability to experience and appreciate it to a degree that would significantly impact its heritage significance.

24.5.6.12 The Church of All Hallows (National Heritage List for England 1161425 – Grade II* Listed Building)

24.5.6.12.1 Identification of the Heritage Asset (Step 1)

143. The Church of All Hallows (previously All Saints) is located c. 3km west of OCS Zone 4 and c. 900m north-west of OCS Zone 8. The church and surrounding churchyard lie on the southern edge of the Walkington village within the Conservation Area.
144. The church has origins dating to the 12th century (southern doorway and transept arches), with much of the current building dating from the 14th and 15th centuries. The church comprises a three-stage west tower with a crenelated parapet, a two-bay nave with a north porch, north and south single transepts and a two-bay chancel with north vestry attached. The church is constructed from ashlar with extensive brick and rubble patching (particularly on the north side) and features a graduated slate roof (**Annex 24.5.1, Plate 24.5-30**).

24.5.6.12.2 Significance of the Heritage Asset (Step 2)

145. The Church of All Hallows is the parish church of Walkington and its importance is recognised by its designation as a Grade II* listed building. The significance of the church is predominantly derived from its physical surviving remains, elements of interest both internal and external and the architectural, archaeological, artistic and historic interest they hold.
146. The immediate setting of the church is provided by the churchyard which creates a historically appropriate space around the church from which the architecture of the building, as well as its functionality as a church, can be appreciated at close range. The churchyard is bounded by mature trees in all directions.
147. The asset is situated on the southern extent of Walkington (set back from the main street) which is itself located in a large, open agricultural landscape (see **Section 24.5.6.11**). The church is best appreciated from within the churchyard and from when approaching along church walk from the south, through the grounds of what would have been the old rectory. This reinforces the historic interest of the church as a component of this historic settlement, with the church a prominent feature when moving around within these areas.
148. Other long-range views of the church, which would allow the viewer to appreciate it as the spiritual and physical focal point of its parish and add to its historic interest, are limited by the mature trees surrounding the churchyard. As a result, these views are sporadic and often glimpsed, with the tower generally seen as partially screened against a fragmented horizon.

24.5.6.12.3 Predicted Change to the Setting of the Assets and Potential Impacts to Heritage Significance (Step 3)

149. Views to the OCS zones are not obtained or obviously achievable when within the immediate locality of the asset (**Annex 24.5.1**, **Plate 24.5-31** and **Plate 24.5-32**). It was identified through assessment of the ZTV that views of the OCS zones would be achievable from the higher elements of the buildings such as the tower.
150. The primary function of the church is as a place of worship, therefore long-range views of the church would normally be considered important to its appreciation as a beacon to worshippers, although this contribution is limited by the planting around the church. This also means that views from the church into the landscape are considered to make a lesser contribution to its appreciation and setting, primarily allowing the rural context of the church to be experienced.

151. Current long-range views towards the church, such as within the churchyard and along church walk to the north would remain unchanged by the presence of the OCS zones within the landscape, as the ZTV has identified they would not be visible from those locations (**Annex 24.5.2, Figure 24.5-2 and Figure 24.5-3**). The presence of the OCS zones within the landscape therefore is not considered to alter any elements of its setting that contribute to its significance.

24.5.6.13 The Black Mill (National Heritage List for England 1310087 – Grade II Listed Building)

24.5.6.13.1 Identification of the Heritage Asset (Step 1)

152. Black Mill is located on Westwood Common c. 1.8km north-west of OCS Zone 4 and c. 2.8km north-east of OCS Zone 8 in the same locality as a group of scheduled prehistoric barrows (which fall outside the ZTV).
153. A windmill has reportedly existed on this site since the 1650s. The stump of Black Mill, however, dates back to the early 19th century. It features five storeys constructed of tarred brick and a crenelated top (**Annex 24.5.1, Plate 24.5-33**). Initially whitewashed, the mill was later tarred, which led to its current name. It was originally known as Far Mill or Baitson's Mill after Gilbert Baitson, who rebuilt it in 1803.
154. The mill was originally part of a group of six mills on Westwood Common, comprising five corn mills and one whiting mill. Black Mill and the windmill at the golf club (NHLE 1346337), located approximately 400m to the south, are the only two surviving windmills on the common.
155. Black Mill was damaged by fire in 1868, leading to the dismantling of all timber parts and working gear. The mill was subsequently used as a dwelling until 1934.

24.5.6.13.2 Significance of the Heritage Asset (Step 2)

156. The importance of the asset is recognised by its designation as a Grade II Listed Building. Its significance derives predominantly from its historic interest as one of only two surviving mills on the common and its relatively short use as a working windmill. The mill retains architectural interest with its crenelated top and tarred brick exterior. The mill also holds communal value as it represents a local landmark and was used as a meeting place for local cricketers during the mid-late 19th century.
157. The historic common and the only other surviving windmill form the immediate setting for Black Mill, allowing it to be fully appreciated as a heritage asset and its connection with the windmill at the golf club to be best understood.

- 158. The surrounding prehistoric earthworks and the expansive views, including those of the windmill to the south, all positively contribute to its setting and enhance the appreciation of its heritage significance (**Annex 24.5.1**).
- 159. The racecourse to the north and the golf course across Westwood Common are only moderate detractors.

24.5.6.13.3 Predicted Change to the Setting of the Assets and Potential Impacts to Heritage Significance (Step 3)

- 160. Views towards the OCS zones from the upper stories of Black Mill may be achievable due to its height and elevated position on Westwood Common (noting these windows are boarded up). The avenue of trees along Walkington and Keldgate Road provide a considerable amount of screening in views south from the mill (**Annex 24.5.1, Plate 24.5-34 and Plate 24.5-35**).
- 161. These views form part of the wider Holderness backdrop dominated by the town of Beverley, particularly its Minster and Church, in the foreground. The OCS zones will both fall within the wider landscape setting to the south of Black Mill, which includes existing modern infrastructure.
- 162. At present, the operation (presence) of the OCS zones and the subsequent predicted change to the wider landscape setting to the south of Black Mill is not considered to significantly alter its setting or the ability to experience and appreciate it to such an extent as to significantly impact its heritage significance.

24.5.6.14 Old Hall (National Heritage List for England 1103420 – Grade II Listed Building) and Associated Buildings at Low Hall (National Heritage List for England 1103419, 1310090, 1346992 – Grade II Listed Buildings)

24.5.6.14.1 Identification of the Heritage Asset (Step 1)

- 163. The Grade II Listed Old Hall and its associated listed barn, garden walls and gate piers (named Low Hall) are located c. 400m east of OCS Zone 4 and c. 3km east of OCS Zone 8.
- 164. The Old Hall is a red brick house from the late 17th to early 18th century, featuring a pantiled roof. The original structure was a single storey with attics above a deep basement. The Barn (NHLE1103419) is an early 18th century single-storey red brick barn. The garden walls (NHLE1310090), also from the early 18th century, are made of red brick with limestone dressings. The gate piers (NHLE1346992) date back to the late 17th to early 18th century and are constructed of red brick with limestone ashlar for the gate rebates.

24.5.6.14.2 Significance of the Heritage Asset (Step 2)

165. The importance of the assets is recognised by their designations as Grade II Listed buildings, with their significance largely deriving from their historic and architectural interest as a good example of an early modern vernacular farmhouse and associated structures.
166. The immediate setting contains the buildings within the farm complex, which are in a relatively run-down condition. Some less well-maintained modern farm outbuildings near the historic structures detract somewhat from their setting. The surrounding modern arable fields within the Holderness landscape form the wider setting from which the farm complex can be appreciated (**Annex 24.5.1, Plate 24.5-36**).
167. Key views from Old Hall are to the south-east of the property, with views of the wider surrounding landscape contributing in part to its heritage significance.

24.5.6.14.3 Predicted Change to the Setting of the Assets and Potential Impacts to Heritage Significance (Step 3)

168. As it is a private dwelling, access to the property was not permitted and therefore the photographs were taken from the adjacent millennium orchard garden, a public park to the south. From this location, OCS Zone 4 will be visible from the adjacent fields with some intermittent screening should the OCS be located within the western extent of OCS Zone 4. Visibility of OCS Zone 8 is largely restricted by the intervening road network and topography.
169. There is likely to be some change to the setting of Old Hall and its associated structures, however, to what extent this change will affect their heritage significance will be revisited in more detail and considered further once the design of infrastructure in the OCS zone is further progressed in terms of location, layout, height, massing etc. as part of an update and further progression of the settings assessment work and reported on as part of the ES.

24.5.7 Initial Conclusions and Next Steps

170. This initial setting assessment has established that the tallest assets (specifically Beverley Minster), assets that are adjacent or closest to OCS Zones 4 and 8, and assets on the higher ground on the Wolds edge will likely have some varying visibility of the OCS which will to some extent affect either their immediate or wider setting.

171. The Beverley sanctuary limit stones at Bishop Burton (NHLE 1012589), Walkington (NHLE 1012591) and Bentley (NHLE 1012590) are best appreciated and experienced from the roadside. It is from this position that an understanding of their functional connection (marking the outer limits of the sanctuary of Beverley from its outlying villages) and the historic connection with Beverley Minster can be realised. The presence of the OCS zones within the wider landscape is not considered to materially impact on the elements of the setting in which they draw their significance.
172. From the Ling Howe (NHLE 1015306) and Ella Hill (NHLE 1018622) barrows the OCS zones will likely fall within their wider setting in long distance views east (both over 4km from the closest OCS Zone 8) due to their elevated position on the Wolds Edge. However, this is not considered likely to detract from their heritage significance or the ability to appreciate and experience the significance of these heritage assets, whose significance is primarily drawn from their archaeological value.
173. Views towards the OCS zones from the Bowl Barrow 400m north of Highfield House (NHLE 1007731) are limited and unlikely to materially change its current setting and impact its heritage significance which is predominantly drawn from its archaeological interest.
174. The proximity of OCS Zone 8 to the 'Cellar Heads' moated site (NHLE 1015312), Risby Hall (NHLE 1001419), Risby Jacobean gardens, hall and medieval settlement remains (NHLE 1018600) is likely to result in large-scale landscape character change within the assets' wider settings. Depending on the exact positioning of infrastructure within OCS Zone 8 there will be an adverse change to the assets' immediate isolated rural setting and their wider setting when viewed from other locations within the landscape. The extent to which this change in setting affects their heritage significance will also be considered further once the design of OCS Zone 8 is further progressed (should OCS Zone 8 be taken forward).
175. There is no visibility from OCS Zone 8 towards Heavy Anti-aircraft gunsite, 350m west of Butt Farm (NHLE 1019186) and partial visibility from OCS Zone 4. The significance of the Heavy Anti-aircraft gunsite include the viewers ability to appreciate (with a degree of prior knowledge) the wider layout of the site, and the relationship of the non-extant hutted accommodation and radar mat with the scheduled gun emplacements. Also, key views out from the Heavy Anti-aircraft gunsite to the north and west reflecting its historical field of fire and its existing relationship with the Butt Farm farmhouse and field to the south are key contributors to the asset's significance. The presence of OCS Zone 4 and the subsequent predicted change to the wider landscape setting to the east of the asset is not considered to significantly alter its setting or the ability to experience and appreciate it to such an extent as to significantly impact its heritage significance.

176. Walkington Conservation Area derives its significance predominantly from its historic and architectural interests which contribute to its character and appearance. The southern and eastern extents of the Conservation Area are bound by modern residential development which restrict views outwards. Beyond the Conservation Area to the south of the village, wooded areas and tree-lined hedgerows further limit views towards the OCS zones. Therefore, the location of both OCS zones is not considered to alter its setting or the ability to experience and appreciate it to a degree that would impact its heritage significance.
177. Views from and towards the Church of All Hallows (NHLE 1161425) are limited to the higher elements of the building such as the tower. The significance of the church is predominantly derived from its physical surviving remains, elements of interest both internal and external and the architectural, archaeological, artistic and historic interest. The presence of the OCS zones within views (from the higher elements of the building) to the south of the church is not considered to significantly alter its setting or the ability to experience and appreciate it to such an extent as to significantly impact its heritage significance.
178. Views from Black Mill (NHLE 1310087) towards the OCS zones are likely to be limited from the upper stories due to its height and elevated position on Westwood Common (noting these windows are boarded up). The avenue of trees along Walkington and Keldgate Road provide a considerable amount of screening in views south from the mill. These views form part of the wider Holderness backdrop dominated by the town of Beverley, particularly its Minster and Church, in the foreground. The presence of the OCS zones within views to the south of Black Mill is not considered to significantly alter its setting or the ability to experience and appreciate it to such an extent as to significantly impact its heritage significance.
179. Old Hall (NHLE 1103420) and associated heritage assets (NHLE 1103419, 1310090 and 1346992) are likely to experience some change to their current arable setting especially from OCS Zone 4. The extent to which this change in setting affects their heritage significance will also be considered further once the design of OCS Zone 4 is further progressed (should OCS Zone 4 be taken forward).
180. A summary of the initial setting assessment results is outlined in **Table 24.5-2** below. As the EIA progresses and the OCS zones are refined further, a re-evaluation of Step 3 and consideration of Step 4 of the setting assessment will be undertaken and presented as an updated technical appendix to the ES chapter.

Table 24.5-2 Summary Results of the Initial Setting Assessment

| Heritage Asset | Distance to OCS Zone 4 | Distance to OCS Zone 8 | Predicted Change to the Setting of the Assets and Potential Impacts to Heritage Significance | To be Taken Forward to the ES |
|---|-------------------------------|-------------------------------|---|--------------------------------------|
| Bowl barrow 400m north of Highfield House (NHLE 1007731 – Scheduled Monument) | 1.7km | 3.5km | No Change | No |
| Beverley sanctuary limit stone, Bishop Burton cross (NHLE 1012589 – Scheduled Monument) | 3.3km | 3.4km | No Change | No |
| Beverley sanctuary limit stone, Bentley Cross (NHLE 1012590 – Scheduled Monument) | 2.6km | 1km | No Change | No |
| Beverley sanctuary limit stone, Walkington Cross (NHLE 1012591 – Scheduled Monument) | 500m | 1.3km | No Change | No |
| Ling Howe long barrow (NHLE 1015306 – Scheduled Monument) | 6.2km | 4km | No Change | No |
| Ella Hill round barrow (NHLE 1018622- Scheduled Monument) | 6.8km | 4.5km | No Change | No |

| Heritage Asset | Distance to OCS Zone 4 | Distance to OCS Zone 8 | Predicted Change to the Setting of the Assets and Potential Impacts to Heritage Significance | To be Taken Forward to the ES |
|---|------------------------|------------------------|--|-------------------------------|
| 'Cellar Heads' moated site and related ridge and furrow earthworks at Risby Park, 700m north-west of Risby Park Farm (NHLE 1015312 – Scheduled Monument) | 2.6km | 140m | Change to setting potentially affecting heritage significance. | Yes |
| Risby Hall (NHLE 1001419 – Grade II Registered Park and Garden), Risby Jacobean gardens, hall and medieval settlement remains (NHLE 1018600 – Scheduled Monument) | 2km | 0m | Change to setting potentially affecting heritage significance. | Yes |
| Heavy Anti-aircraft gunsite, 350m west of Butt Farm (NHLE 1019186 – Scheduled Monument) | 1.2km | 780m | No Change | No |
| The Minster Church of St John (Beverley Minster) (NHLE 1084028 – Grade I Listed Building) | 2km | 4km | Change to setting potentially affecting heritage significance. | Yes |
| Walkington Conservation Area | 2.8km | 800m | No Change | No |
| Church of All Hallows (NHLE 1161425 Grade II* Listed Building) | 3km | 900m | No Change | No |

| Heritage Asset | Distance to OCS Zone 4 | Distance to OCS Zone 8 | Predicted Change to the Setting of the Assets and Potential Impacts to Heritage Significance | To be Taken Forward to the ES |
|--|------------------------|------------------------|--|-------------------------------|
| The Black Mill (NHLE 1310087 – Grade II Listed Building) | 1.8km | 2.8km | No Change | No |
| Old Hall (NHLE 1103420 – Grade II Listed Building) including associated buildings at Low Hall (NHLE 1103419, 1310090, 1346992 – Grade II Listed Buildings) | 400m | 3km | Change to setting potentially affecting heritage significance. | Yes |

Annex 24.5.3 Heritage Screening Setting Assessment

Introduction

182. This annex presents the findings of a screening assessment of all designated heritage assets within a 5km Study Area of the OCS zones to inform the initial setting assessment presented in **Section 24.5.6**.
183. The approach taken to screening the designated heritage assets is described in **Section 24.5.5**.
184. The following tables present the results of the screening assessments for each type of designated heritage asset.

Table 24.5-3 Scheduled Monuments Screening Assessment

| National Heritage List for England ID | Asset Name | Screening Notes |
|--|--|--|
| 1007731 | Bowl barrow 400m north of Highfield House | Further assessed in Section 24.5.6 – Onshore Heritage Setting Assessment. |
| 1012589 | Beverley sanctuary limit stone, Bishop Burton Cross | Further assessed in Section 24.5.6 – Onshore Heritage Setting Assessment. |
| 1012590 | Beverley sanctuary limit stone, Bentley Cross | Further assessed in Section 24.5.6 – Onshore Heritage Setting Assessment. |
| 1012591 | Beverley sanctuary limit stone, Walkington Cross | Further assessed in Section 24.5.6 – Onshore Heritage Setting Assessment. |
| 1015306 | Ling Howe long barrow | Further assessed in Section 24.5.6 – Onshore Heritage Setting Assessment. |
| 1015312 | 'Cellar Heads' moated site and related ridge and furrow earthworks at Risby Park, 700m north-west of Risby Park Farm | Further assessed in Section 24.5.6 – Onshore Heritage Setting Assessment. |
| 1018600 | Risby Jacobean gardens, hall and medieval settlement remains | Further assessed in Section 24.5.6 – Onshore Heritage Setting Assessment. |
| 1018622 | Ella Hill round barrow | Further assessed in Section 24.5.6 – Onshore Heritage Setting Assessment. |
| 1019186 | Heavy anti-aircraft gunsite, 350m west of Butt Farm | Further assessed in Section 24.5.6 – Onshore Heritage Setting Assessment. |

APPENDIX 24.5 ONSHORE HERITAGE SETTING ASSESSMENT

| NHLE ID | Asset Name | Screening Notes |
|---------|--|---|
| 1011903 | Round barrow 40m north of Cow Wold Road | Nearly 5km away from closest OCS Zone (Zone 8). Believed screened by topography. No further assessment. |
| 1011905 | Round barrow 100m south of Cow Wold Road | Nearly 5km away from closest OCS Zone (Zone 8). Believed screened by topography. No further assessment. |
| 1014001 | Romano-British enclosure in Burton Bushes, Westwood Common | Located within Burton Bushes and believed further screened by topography. No further assessment. |
| 1003598 | Blackfriars (remains of) | Screened by topography, buildings, and vegetation – no further assessment. |
| 1008122 | Hall Garth moated site south of Beverley Minster | Screened by topography, buildings, and vegetation – no further assessment. |
| 1013402 | Site of Preceptory of the Holy Trinity (Knights Hospitallers) | Screened by topography, buildings, and vegetation – no further assessment. |
| 1013990 | Bowl barrow on Westwood Common, 610m north-west of Blackmill | Screened by topography, buildings, and vegetation – no further assessment. |
| 1013991 | Bowl barrow on Westwood Common, 150m north of Blackmill | Screened by topography, buildings, and vegetation – no further assessment. |
| 1013992 | Bowl barrow on Westwood Common, 50m north of Blackmill | Screened by topography, buildings, and vegetation – no further assessment. |
| 1013993 | Square barrow on Westwood Common, 150m north-west of Blackmill | Screened by topography, buildings, and vegetation – no further assessment. |

APPENDIX 24.5 ONSHORE HERITAGE SETTING ASSESSMENT

| NHLE ID | Asset Name | Screening Notes |
|---------|--|---|
| 1013994 | Group of four square barrows on Westwood Common, 200m north-west of Blackmill | Screened by topography, buildings, and vegetation – no further assessment. |
| 1013995 | Square barrow on Westwood Common, 120m south of Blackmill | Screened by topography, buildings, and vegetation – no further assessment. |
| 1013996 | Square barrow on Westwood Common, 50m west of Blackmill | Screened by topography, buildings, and vegetation – no further assessment. |
| 1013997 | Square barrow on Westwood Common, 230m north-west of Blackmill | Screened by topography, buildings, and vegetation – no further assessment. |
| 1013998 | Square barrow on Westwood Common, 230m NNW of Blackmill | Believed screened by topography, buildings, and vegetation – no further assessment. |
| 1013999 | Romano-British enclosure and two adjoining fields on Westwood Common, 510m south-west of Blackmill | Screened by topography, buildings, and vegetation – no further assessment. |
| 1014000 | Oval barrow on Westwood Common, 55m north-west of Blackmill | Screened by topography, buildings, and vegetation – no further assessment. |
| 1019823 | Baynard Castle | Screened by topography, buildings, and vegetation – no further assessment. |
| 1005200 | Moated site, 350m south-east of Low Hall | Screened by topography, buildings, and vegetation – no further assessment. |
| 1005201 | Monastic grange, 180m south of Manor Farm | Screened by topography, buildings, and vegetation – no further assessment. |
| 1007563 | Four round barrows 780m north-east of Littlewood Lodge | Screened by topography, buildings, and vegetation – no further assessment. |

APPENDIX 24.5 ONSHORE HERITAGE SETTING ASSESSMENT

| NHLE ID | Asset Name | Screening Notes |
|---------|---|--|
| 1007717 | Barf Hill moated site | Screened by topography, buildings, and vegetation – no further assessment. |
| 1007842 | Moated site and two fishponds 80m south-west of Parkhouse Farm. | Screened by topography, buildings, and vegetation – no further assessment. |
| 1007949 | Moated site of Leconfield Castle | Screened by topography, buildings, and vegetation – no further assessment. |
| 1008043 | Hayholme moated site | Screened by topography, buildings, and vegetation – no further assessment. |
| 1008292 | Moated site 100m north of Parkhouse Farm | Screened by topography, buildings, and vegetation – no further assessment. |
| 1011212 | Skipsea Castle: 11 th century motte and bailey castle and inland harbour | Screened by topography, buildings, and vegetation – no further assessment. |
| 1013705 | Hallgarth medieval hall and moat | Screened by topography, buildings, and vegetation – no further assessment. |
| 1013711 | Churchyard cross, 4m north of All Saints Church | Screened by topography, buildings, and vegetation – no further assessment. |
| 1015613 | Square barrow cemetery, moated site, fishponds and medieval settlement remains at Scarborough | Screened by topography, buildings, and vegetation – no further assessment. |
| 1015818 | Moated site 310m north-east of Scarborough church | Screened by topography, buildings, and vegetation – no further assessment. |
| 1016053 | Iron Age barrow 400m south-east of Station Farm | Screened by topography, buildings, and vegetation – no further assessment. |

APPENDIX 24.5 ONSHORE HERITAGE SETTING ASSESSMENT

| NHLE ID | Asset Name | Screening Notes |
|---------|--|--|
| 1016250 | Moated site 550m south-east of Scorbrough Hall | Screened by topography, buildings, and vegetation – no further assessment. |
| 1019864 | The Reins medieval deer park boundary within Park Ends and Oaktree Wood | Screened by topography, buildings, and vegetation – no further assessment. |
| 1021192 | Royal Observer Corps underground monitoring post and World War II visual spotting post, 200m north of Southfield House | Screened by topography, buildings, and vegetation – no further assessment. |
| 1021289 | Hall Garth Motte and Bailey Castle, moated site and fishponds | Screened by topography, buildings, and vegetation – no further assessment. |

Table 24.5-4 Listed Buildings Screening Assessment

| NHLE ID | Asset Name | Screening Notes |
|---------------------------------|--|---|
| Grade I Listed Buildings | | |
| 1084028 | The Minster Church of St John | Further assessed in Section 24.5.6 – Onshore Heritage Setting Assessment. |
| 1103394 | Church of Saint Mary | Following initial screening visit this asset appeared screened by buildings and vegetation – no further assessment. |
| 1083824 | Church of All Saints | Screened by topography, buildings, and vegetation – no further assessment. |
| 1083960 | The Guildhall | Screened by topography, buildings, and vegetation – no further assessment. |
| 1084022 | The Hall (now Borough Council Offices) | Screened by topography, buildings, and vegetation – no further assessment. |
| 1162565 | Beverley North Bar Nos 65 and 67 (Bar House) including garden wall, piers and railings | Screened by topography, buildings, and vegetation – no further assessment. |
| 1162693 | The Parish Church of St Mary | Screened by topography, buildings, and vegetation – no further assessment. |
| 1318235 | Gates, gate piers and railings to Norwood House | Screened by topography, buildings, and vegetation – no further assessment. |
| 1346372 | The Market Cross | Screened by topography, buildings, and vegetation – no further assessment. |
| 1346387 | Norwood House (now Beverley High School for Girls) | Screened by topography, buildings, and vegetation – no further assessment. |

APPENDIX 24.5 ONSHORE HERITAGE SETTING ASSESSMENT
